Sea Grant, a network of 33 programs across the United States, is accepting applications for paid summer internships for undergraduate students from indigenous or underrepresented communities who are pursuing careers in marine policy, marine science, science communication or other STEM-related field.

The interns will work under the supervision of Sea Grant mentors or scientists working on Sea Grant-funded projects. They will gain job experience as they support Sea Grant’s work to enhance the sustainable use and conservation of marine, coastal and watershed resources. The intern may be based at a Sea Grant office or at a partner organization.

Sea Grant’s community-engaged internship will last for 10– weeks during the summer, working 40 hours a week.
